Webinar: Facial Recognition and Cyber Crimes

According to the FBI, the threat from cyber crimes is serious – and growing. And it's not just corporations that are at risk from this threat. Citizens in your communities could be targets of fraudsters and identity thieves, or children could be targeted by online predators.

In this webinar, Retired NYPD Detective, Roger Rodriguez will share how to analyze images for cyber-crime investigations such as prostitution rings, identity theft, fraud, and child exploitation. In many cases, these investigations included poor quality images obtained from crime victims, social media, or other online sources.

Topics Include:

- Cyber crime overview
- Using facial recognition in cyber crime investigations
- Image editing techniques for CCTV or social media images
- Use case examples

When: Wednesday, May 17th 3:00 PM EST / 2:00 PM CST
